# WHO WE ARE.?

- Welcome to Vegnar

We believe in making sustainability effortless. Our eco-friendly tableware, made from bagasse a natural byproduct of sugarcane offers a smarter alternative to plastic and foam. Whether you're hosting a party, running a food business, or simply looking for a greener way to enjoy your meals, our biodegradable and compostable tableware is the perfect choice.

Designed to be sturdy, functional, and stylish, our bagasse tableware holds up to all kinds of dishes hot, cold, dry, or saucy without compromising on quality. Plus, by choosing Veganr Green, you're making a small change that adds up to a big impact for the planet.

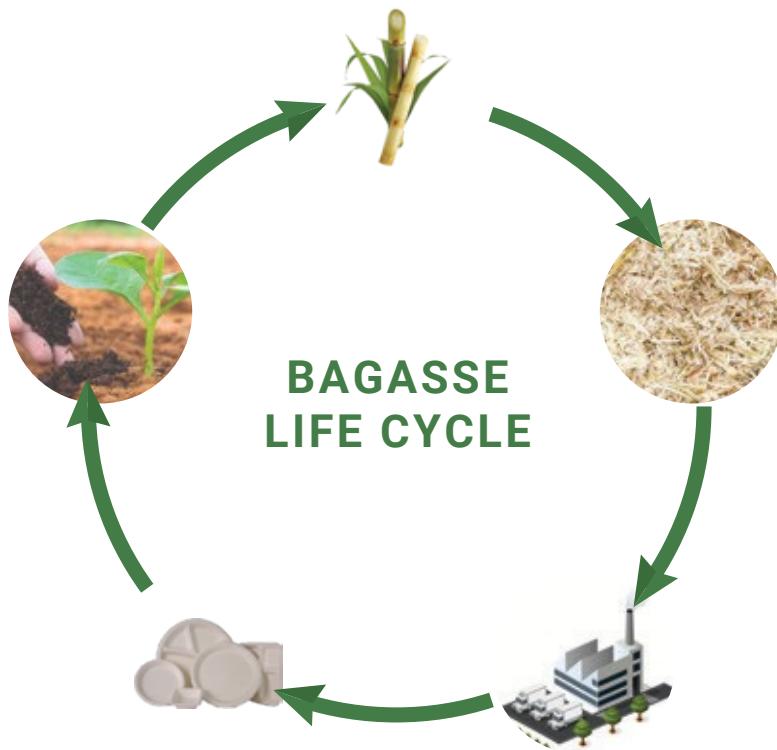

Our mission is to offer sustainable, eco-friendly tableware that helps reduce plastic waste and protect the planet.

Our vision is to lead the way in sustainable tableware, making eco-friendly choices the norm for a greener future.

# Compostable Product

**Bagasse : “Plant-Based & Truly Circular Economy”**

The Earth's resources aren't Unlimited.

Our collective appetite for consumption and convenience is depleting resources faster than the earth can Renew them.

Our world currently favours a ‘linear economy’ where materials are extracted, turned into products, and then thrown away. It’s time to move away from this model towards a “Circular Economy” – a more sustainable way of living where materials are treated as precious resources to be continually Reused or Regenerated.

Hereby where Bagasse products can be industrially and home compostable. Under composting conditions, bagasse, along with the food waste it contains, will break down into a nutrient-rich compost that can be used as fertiliser and soil conditioner enriching the Fertility of Our MotherLand.

**Sustainably Packed. Naturally Disposed.**

Plastic

### Environmental Advantages Of Bagasse :-

#### 1. Home Compostable

Our bagasse packaging with no added PFAS means it'll biodegrade in 30-90 days in composting conditions, leaving behind no toxic residue and creating nutrient-rich compost.

**2. Rapidly Renewable Resource** Since bagasse is made from sugarcane pulp, it can reduce the need to cut down trees and slow deforestation. Trees take a long time to grow to maturity before they can be harvested. And when harvesting them, acres of land are cleared making it a resource-intensive process. Sugarcane, on the other hand, can be harvested annually making it a rapidly renewable resource.

**3. Reduces Global Warming** Forests especially tropical forests store enormous amounts of carbon. When forests are destroyed, that carbon is released to the atmosphere, accelerating global warming. Deforestation accounts for around 10% of total heat-trapping emissions roughly the same as the yearly emissions from 600 million cars.
